

COMMUNICATION CONTROL APPARATUS, COMMUNICATION APPARATUS,
COMMUNICATION SYSTEM, AND METHOD OF THE SAME

ABSTRACT OF THE DISCLOSURE

5

A system friendly to users engaged in multipoint communication, wherein Multipoint communication using a plurality of multipoint communication terminal apparatuses connected via a fixed telephone line network, IP network, and a cellular phone line network is controlled by an MCU. The MCU controls communication so that a signal received from the multipoint communication terminal apparatuses and a signal for providing predetermined advertising information are transmitted to the multipoint communication terminal apparatuses.
